PROJECTS
HelloHealth | *Software Developer* | Github

May 2021 - June 2021

A medical app that allows patients to find doctors, make appointments, and have one-on-one video meetings.
- Built one-on-one video meeting functionality and live chat between patients and doctors
- Designed appointment system for doctors and patients
- Established a polymorphic association in database to extend user objects into patients or doctors

Our Code | *Sole Developer* | Github

April 2021

A social media web application where users can share code snippets and livestream code.
- Implemented core social media functionality such as followers, posts, likes, and comments
- Added live streaming feature that allows a user to live code to viewers with a webcam option

EMPLOYMENT
Sirch, Aruba - Self Employed

July 2023 - Present

Software Engineer
- Developed and maintained custom software solutions for clients
  - Blue Nap Americas: Created bespoke presentation solution to show network infrastructure. Live Deployment
  - Star Circle Retail: Developed in house tooling to assist in sales and distributor purchases.
  - Kawsana: Built the listings vertical slice for an ecotourism platform in Colombia, including creation, display, filtering, and interactive Google Maps integration. Live Deployment

Profound Projects, Curacao - Remote Contractor

April 2022 - Present

Software Engineer
- Created a cross platform mobile app for Curacao Port Authority using Flutter
  - Implemented caching for offline data access and push notifications using FCM
- Developed a vacation rental booking system with features including minimum night stays, extended stay discounts, and coupon handling.
